

HPLC SYSTEM **S 500** SERIES

The *Sykam HPLC System S 500 Series*

is intended for all routine analysis as well as for the ambitious analyst.

The system configuration is highly variable and several upgrade options make this system suitable for the whole range of analytical applications.

S 1125 HPLC PUMP SYSTEM

The **Sykam S 1125 HPLC Pump System** is a very flexible and powerful HPLC solvent delivery system. Its modular setup makes the **S 1125** one of the most

versatile pump systems on the market. The possible configurations include an Isocratic or Quaternary Gradient Pump.

Stepper Motor

The **S 1125** is driven by a high-power stepper motor. The stepper motor has a much better resolution in the low-flow range than a conventional DC motor.

Active Mixer

The **S 1125** low pressure gradient module has an active mixer to achieve highly precise and accurate gradient results.

Lubrication

The **S 1125** camshaft is constantly lubricated within a sealed chamber to guarantee long lifetime and low maintenance.

Dual-Piston Pumphead

The **S 1125** pumps use a dual-piston pumphead for low pulsation. Together with electronic pressure compensation the S 1125 pumps are suitable for all analytical tasks in HPLC and GPC.

Optional: Piston Backflushing

The **S 1125**'s pump head incorporates an optional active piston backflushing system; this system is interchangeable with old Sykam pumps and does not require an additional motor.

S 1125 Configurations

S 1125 Isocratic HPLC Pump

The **S 1125 Isocratic Pump** is a robust, low-pulsation solvent delivery system. The pumphead is easily accessible from the front panel to make routine maintenance, like changing pump seals, easy and fast. The system is available with Micro, Analytical or Semi-Preparative pumphead in Stainless Steel or PEEK.

S 1125G Low-Pressure Quaternary Gradient Pump

The **S 1125G Low-Pressure Quaternary Gradient Pump** incorporates an active low pressure mixer with adjustable mixing volume. The mixing chamber volume can be freely adjusted. An optional integrated vacuum degasser removes dissolved gases in the eluents and prevents air bubbles in the system. The system is available with Micro, Analytical or Semi-Preparative pumphead in Stainless Steel or PEEK.

The **S 1125** pumps use a dual-piston pumphead for low pulsation. Together with electronic pressure compensation the **S 1125** pumps are suitable for all analytical tasks in HPLC and GPC.

S 5250 SAMPLE INJECTOR SYSTEM

The **Sykam S 5250 Sample Injector System** is a very flexible and powerful HPLC autosampler with excellent reproducibility and linearity properties. Variable vial racks and adaptors for microtiter plates as well as a multitude of firmware options make this system highly adaptable and suitable for any analytical application.

Robust Design

Durable X/Y/Z-Sampling

The **S 5250 Sample Injector System** features a mechanically durable X/Y/Z-Sampling-Mechanic designed for long life operation. The self-lubricating bearings keep the routine maintenance at a minimum and avoid troubles caused by dusty environments. High precision stepper motors drive the X/Y axis for accurate positioning. Microstepping mode enables a high resolution for the syringe dosing and vial positioning.

Dual-Needle Design

The Dual-Needle design of the **S 5250 Sample Injector System** avoids system blockages caused by septum particles injected into the system. The ventilation needle pierces the septum before the injection needle moves into the sample vial (see figure on the right). As the more fragile injection needle does not need to pierce the vial septum, stronger vial caps or plastic vials can be used without problems.

Accessibility

The injection valve with sample loop and injection port can be accessed directly from the instrument front without removing any protective covers. The dosing syringe can be accessed from the side of the instrument through a hinged glass panel. The exchange of the syringe can be done without the requirement of any tools.

Figure: Dual-Needle Injection

Precision & Modularity

Performance

The **Sykam S 5250 Sample Injector System** offers multiple injection modes depending on application and sample needs. Besides fixed loop overfilling and variable volume injection the instrument offers a **Zero-Waste** injection mode for injecting very small sample amounts by moving the sample into the middle of the sample loop.

Linearity and injection precision can be optimized for any volume by different sample loops and syringe sizes.

Technical Specifications

Modular Options

The modular nature of the **Sykam S 5250 Sample Injector System** offers the possibility to “*just buy what you need*”. Modular options include sample heating/cooling for any sensitive sample material and derivatization for automatized pre-column derivatization tasks from reagent derivatization to automatic sample dilution.

S 3245 UV/VIS DETECTOR

The **Sykam S 3245 UV/Vis Detector** is a variable wavelength UV/Vis detector for routine analysis and sophisticated research. The dual lamp design offers a wavelength range of 190 – 800 nm with a low baseline noise. The front-accessible flowcell can be easily exchanged, as well as the lamps which are accessible through a side panel in the instrument housing.

Integrated Wavelength Program

The **S 3245 UV/Vis Detector** features a wavelength program to change the selected wavelength over time. With this feature the optimum wavelength can be selected for each analyzed substance according to its retention time.

Integrated Peak Detector

The integrated Peak Detector works as a basic fraction collector. The peak detection level can be freely programmed for peak start and peak end to enhance the collection purity. An integrated 24V output for switching a solenoid valve is used for the fraction collection, which is automatically operated with a selectable time delay.

Optional – Dual-Wavelength

The **S 3245 UV/Vis Detector** is available with an optional second wavelength. This feature enhances the Wavelength Program feature that you can measure 2 different wavelengths at the same time. A second D/A converter output comes with this option to keep the system flexible to be used with any data acquisition software available.

Optional – Online-Scan

Another option for the **S 3245 UV/Vis Detector** is the Online Scan. With the Online Scan whole spectrum information can be gathered at a certain time. This scan information is stored internally and can be accessed at any time. The Online Scan is a good alternative to a full UV PDA detector.

S 3345 PDA DETECTOR

The **Sykam S 3345 UV/Vis Detector** is a photo-diode-array (PDA) detector for routine analysis and sophisticated research. The dual lamp design offers a wavelength range of 190 – 720 nm (256 Diodes)

or 190 - 1015nm (1024 diodes) with a low baseline noise. The front-accessible flowcell can be easily exchanged as well as the lamps which are accessible through a side panel in the instrument housing.

S 3585 REFRACTIVE INDEX DETECTOR

The **Sykam S 3585 Refractive Index Detector** offers the sensitivity, stability and reproducibility required for optimal RI detection.

The thermal isolated optic with a countercurrent heat exchanger and with its programmable temperature control, results in an extremely stable baseline and an optimal Signal /Noise ratio.

The **Sykam S 3585 Refractive Index Detector** provides autopurge and autozero capabilities, as well as RS232 communication to acquire data directly without using any external signal interface.

Sykam S 3585 Refractive Index Detectors are available for:

- micro
- analytical
- semipreparative mode

S 4120 COLUMN OVEN

The **Sykam S 4120 Column Oven** is a contact heat transfer oven for high temperature stability and accuracy. The columns are mounted inside the column oven in optimized column holder which enclose the

complete column to get the best temperature transfer between the heater and the column. Up to three 350mm columns can be mounted at the same time.

Heating

The **Sykam S 4120 Column Oven** standard version features a high temperature controller for stable column temperatures of +30°C up to +150°C. The temperature accuracy is within 0.1 °C.

Heating/Cooling

The **Sykam S 4120 Column Oven** is also available with active Heating/Cooling with Peltier technique. The temperature range is +5°C up to +100°C. The Heating/Cooling unit uses the same efficient controller as the basic version with temperature accuracy better than 0.1 °C.

Temperature Time Program

The Heating/Cooling variant offers an optional Temperature Time Program for stand-alone operation.

Integrated Valve

The **Sykam S 4120 Column Oven** offers the option to include an automatic switching valve of the **Sykam S 6000 Valve Series**, for example the **S 6070 Column Selection Valve**, but all **S 6000** Valves can be integrated.

Leakage Sensor

The **S 4120 Column Oven** offers a high sensitive Leakage Sensor which detects the vapors of organic solvents.

Temperature Fuse

Besides a Leakage Sensor the **S 4120** offers a temperature fuse which shuts down the unit when the temperature becomes too high, because of an electronic defect.

OEM Options

The **Sykam S 4120 Column Oven** itself is available as a complete OEM instrument. Please contact us for any further information on OEM modules.

S 7515 VACUUM DEGASSER

The **Sykam S 7515 Vacuum Degasser** is an online degasser system with high efficiency. Dissolved gases are removed from the solvents by applying vacuum to a semi-permeable membrane.

High Efficiency

The high efficient Teflon-AF® capillary has a much higher efficiency than a normal Teflon capillary of similar size. This allows the usage of a smaller length of capillary to reduce the dead volume of the system considerably.

2 Operation Modes

The **S 7515** can be run either with constant speed or in Hysteresis Mode, which switches the vacuum pump on or off.

5-Year Membrane Warranty

The **S 7515** vacuum pump uses a membrane for creating the vacuum. This membrane is made of a specific Teflon material specifically designed for fast movements. **Sykam** offers a 5-year warranty on the lifetime of this membrane.

Multi-Channel

The **S 7515 Vacuum Degasser** is available as 1-Channel, 2-Channel, 3-Channel, or 4-Channel version. Each solvent channel can be used for a different solvent. Several channels can be used in series to increase the efficiency even more.

OEM

Sykam offers this instrument as an OEM product to any interested party, even for small numbers. Besides the complete instrument **Sykam** also offers the vacuum pump and vacuum chambers as OEM modules.

Working Principle

The solvent flows through a short length of Teflon AF® capillary inside a sealed chamber (vacuum chamber) is completely sealed to the environment and vacuum is applied with a pump. Due to this vacuum any dissolved gases in the solvent running through the inner capillary are removed through its semi-permeable membrane wall. The high efficiency of the Teflon AF® material allows the usage of a very short length of capillary inside the vacuum chamber.
